Points (P) on each **critterion** (C) is equal to the number of Y divided by the **total number of elements in all indicators** (NEI) multiply by the **percentage** (C%) assigned to the criterion based on the case scenario in the table below by one hundred (100). Computation of points is up to two (2) decimal places. (*Annex 1*)

$$P = Y/NEI*(C%)* 100$$

3. The initial result given by one assessor is equal to the sum of all criteria points.

$$\text{Result} = \text{QPC} + \text{QPD} + \text{REL} + \text{SAF} + \text{HYG} + \text{OQ}$$

4. The final result (FR) is the average of the results given by the three panelists (Assessors) panel of assessors. FR computation is up to two (2) decimal places. (*Annex 2*)

$$\text{FR} = (\text{Ass1Res} + \text{Ass2Res} + \text{Ass3Res})/3$$
